

TEST FASTER. TEST SMARTER.

Let's Rid the World
of Bad Software

eggplant

Test Automation Software

What we do

Augmented Intelligence: Eggplant AI, combined with best practice principles can generate and automate Test Cases within milliseconds allowing the Human Tester to focus on complex or specific test cases.

Cross-Platform Automation: One Automated Test Case built in Eggplant can be executed against any application, platform, or device. This drastically reduces new script creation time and maintenance cost.

Non-Invasive: Eggplant requires no agent to be installed on the System under Test. Eggplant uses a two-stage system to access Applications just as your user would.

Eggplant Automation Cloud: A part of your testing infrastructure housing real mobile, tablets, or IoT devices as well as virtualized systems so your Tests can be executed against any device at any time.

Real-User Journeys: Eggplant monitors how your users' interface with your application in production. This information is routed back to the Eggplant AI engine and new test cases, based on real-user journeys are executed as part of your testing regiment.

Key benefits:

- One Eggplant **digital twin** can execute thousands of test cases against any platform, device, or software
- Eggplant is not dependent on specialized skills as this **intuitive technology** allows business testers to be up and running within hours
- **Any technology** can be monitored and automated without special frameworks or plug-ins
- Eggplant keeps up with your **pace of release**.
